

RNID smoke alarm

This smoke alarm system is extremely flexible and can be extended to suit the requirements of your accommodation, with the capacity to add up to nine additional detectors.

The main base unit is placed by the bed and a vibrating pad is placed under the pillow. Once the smoke detectors are installed and detect a fire, the system is activated, the strong strobe light flashes on the base (excellent for day and night time alerting) and the powerful under pillow pad vibrates to wake the heaviest sleeper.
