

Braille Star 80

Braille Star 80 is the professional workspace with 80 braille cells. Combined with a PC keyboard, Braille Star 80 can be used stand alone to take notes. In this way Braille Star 80 becomes an intelligent braille system. A PC keyboard can be placed directly on top of the braille star 80. Braille Star 80 can be connected to a PC via USB or the serial port.

While working with the PC, you can also take some internal notes independently from the PC. You can take those notes either with the Braille keys in front of the Braille Star 80 or with the PC keyboard on top of the Braille Star 80.

Features:

- 80 concavely shaped Braille cells
- 80 Cursor-routing keys
- 2 switchable external keyboard-inputs
- USB and serial ports
- 4 MB text memory
- 2 extended up/down keys
- 2 triple action keys
- 8 function keys
