

## Products for your PC

PCs can open up a world of information, giving you access to live news, entertainment and communication with others. They can also be useful at work.

Products for your PC can convert text into braille, change text into large print and change to colours on the screen, and speak the text to you.

### [Braille and your PC](#)

There are several different braille products for use with your PC.

### [Screen magnification](#)

This allows you to increase the size of text and graphics on your PC to make it easier to see. There are a number of different methods for achieving this, some of which require new equipment and some which just need software.

### [Screen readers](#)

They do literally what their name suggests - they read the text from the screen. Unlike Talking Browsers, they function with almost any computer program and are not just used to browse the internet.

### [Talking browsers](#)

They differ from screen readers. They are specially designed for reading webpages and they are a browser and screen reader combined.
